

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 7/01/00 and 6/30/01.

For comparison purposes, the following shows the Midwest states' (Illinois, Wisconsin, Michigan, Ohio and Indiana) electric utilities averages for sources of electricity generation and emissions for 1999.* 77 percent of ComEd's electricity is generated by nuclear power, and another 1 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 53% less than the regional average for carbon dioxide, 69% less for nitrogen oxides, and 88% less for sulfur dioxide.

(Midwest Sources—rounded to the nearest whole percent)

Coal-fired power	75%
Hydro power	1%
Natural gas-fired power	1%
Nuclear power	23%
Oil-fired power	less than 1%
Renewables	less than 1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Emissions—pounds per 1000 kilowatt-hours)

Carbon dioxide	1,647.07 lbs.
Nitrogen oxides	6.35 lbs.
Sulfur dioxide	11.87 lbs.

Green Power for Chicago

On June 6, 2001, the City of Chicago announced it would make "the largest purchase of clean power in the country" through an agreement with ComEd and the Environmental Resources Trust (ERT). This places Chicago at the forefront of the developing market for renewable energy and enables the City and its municipal partners to support the use of existing renewable energy resources, and promote the development of new renewable generation.

Renewable energy comes from the sun, water, wind and the earth, which are non-depletable sources of energy. These resources can create environmental benefits in the form of reduced impacts on the air, water and land by reducing the amount of electricity produced by coal and natural gas.

Under an agreement with ERT, ComEd may sell EcoPowerSM certificates, which represent the environmental benefits of electricity produced from renewable energy resources. ComEd will sell ERT the certificates at wholesale and the City, in turn, will purchase them from ERT. ComEd will direct the net proceeds from selling the certificates to an ERT-administered renewable energy reinvestment fund.

In the first contract year, the City will purchase certificates in an amount equivalent to at least 3 percent of the its electricity consumption — increasing to 20 percent after five years. Through this agreement, the City and ERT, along with ComEd, are helping to make a difference in the environment and promote sustainable renewable resource development in Illinois.

Environmental Disclosure Information

Twelve Months Ending June 30, 2001

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending June 30, 2001	Percentage of Total
Biomass power	0%
Coal-fired power	22%
Hydro power	0%
Natural gas-fired power	1%
Nuclear power	77%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	0%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending June 30, 2001

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWhs) PRODUCED from KNOWN Sources for the 12 months ending June 30, 2001	
Carbon dioxide	780.60 lbs.
Nitrogen oxides	1.97 lbs.
Sulfur dioxide	1.48 lbs.
High level nuclear waste	0.0049 lbs.
Low level nuclear waste	0.0002 cubic feet

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site; www.icc.state.il.us.
